Check Visit & Card Swap Log

Reusable: every walk in, with the wind, the battery and the card

Name _____ **Property** _____

Page number _____

Every visit is a small disturbance, so every visit gets a line. Over a season this log shows which cameras you visit too often, which batteries fade first, and whether a site went quiet after a check.

Before you walk in

- [ ] Wind blowing from the camera toward you, or across your route, not from you toward the bedding side
- [ ] Spare card, formatted in a camera, and a spare set of batteries in the pack
- [ ] Card reader or viewer, to check a test photo before walking away
- [ ] Midday, when possible, when animals are least likely to be moving through

Visit log

Date	Time	Camera	Wind on the walk in	Days since last visit	Battery %	Card swapped	Brush cleared / aim checked	Anything disturbed	Next visit

Date	Time	Camera	Wind on the walk in	Days since last visit	Battery %	Card swapped	Brush cleared / aim checked	Anything disturbed	Next visit

What makes a visit short

From this site's own catalog.

- **Cabor USB-C trail camera viewer**: Reads the card on a phone at the tree, so a bad angle is fixed on the same visit.
- **SanDisk Ultra 16GB SDHC**: A low-cost second card to swap in, so photos are reviewed at home rather than at the tree.

Researched guidance, not professional advice. Check your state wildlife agency's current rules before placing any camera on land you hunt, on public land or near a property line, and get the landowner's permission on land that is not yours. Estimates in this kit come from this site's own models; real cameras vary.
